Buea, Cameroon · youtakelvin79@gmail.com · linkedin.com/in/youta-kelvin · github.com/youtakelvin237

Summary

Software Engineer with Associate degree and currently doing B.Tech in Software Engineering and hands-on experience building and deploying production web and mobile applications. Backend-focused, with experience in, Node.js, PostgreSQL, Docker, AWS firebase, superbase and flutter. founder of WhatNext AI, LossConnect, and Lopita with experience in taking products from idea through launch and ongoing iteration. Open to remote software engineering opportunities.

Skills

Backend: Node.js, REST APIs, Prisma, PHP, Backend Architecture, Socket.IO

Frontend/Mobile: flutter, Next.js, Cross-platform Mobile Development

Databases: PostgreSQL, Redis, Firebase, Superbase, Database Design & Integration

Cloud/DevOps: AWS, Docker, Render, Cloud Infrastructure

Experience

WhatNext AI

Founder, AI Engineer & Project Lead | March 2025 – Present

Founder and lead developer of WhatNext AI, an AI-powered career orientation, mentorship, and skills-development platform designed to help young people make better career and professional decisions

- Lead the complete product development lifecycle from problem identification and product ideation to development, testing, deployment, and continuous improvement.
- Designed and developed an AI-powered career assistant focused on providing accessible career guidance and mentorship support.
- Gained practical experience in AI engineering, including dataset preparation, AI model experimentation, model training workflows, and AI model integration.

- Worked on developing an offline AI capability, with the goal of allowing users to access career-oriented AI assistance even with limited or unreliable internet connectivity.
- Explored lightweight AI model approaches suitable for mobile and resource-constrained environments.
- Integrated AI functionality into a Flutter mobile application as part of the product's offline-first vision.

SmartChat

- Co-Founder and CTO | June 2026 – Present
- I design a Multi-Tenancy management system(using PostgreSQL, Prisma, Render)
- I developed a full Software as-a service and the mobile application(using Node.js, flutter, and Firebase)

AFAYI SOLUTION

Software Engineer, Intern | **April 2025 – October 2025**

- Contributed to the development and delivery of web and mobile applications for client and internal products.
- Participated in software development, implementation, debugging, and application improvement.
- Worked on translating requirements into functional software solutions.
- Collaborated within a professional software development environment.
- Gained practical experience working with real-world application development workflows.

CIMFES26 WINNERS

— During the hackathon I serve as the AI engineer, and CEO

Global Innovation Hackathon

Projects

WhatNext AI — Career oriented, mentorship, skills building AI-Powered system that works offline

SmartChat — AI-Powered system that monitor sales, visitors, improve and scale small businesses and assist customer even in the absent of the business owner.

LossConnect — a platform that connect lost items to the rightful owners; I was the CTO.

LOPITA — An AI powered system for disease analyses, scanning and it triggers an SMS to a doctor

Education

CHITECHMA University — B.Tech Software Engineering (2024–2027)

CHITECHMA University — Higher National Diploma Software Engineering (2024–2026), upper credit.

HIGH SCHOOL — — Advance Level (A/L) S2, Five Papers
